

# SOLUTIONS for Integrated Land and Seascape Management in Indonesia

## ABOUT SOLUSI

November 2023 – December 2028

SOLUSI supports the Indonesian Government to mitigate the degradation of land and seascapes in Indonesia, increasing the resilience of ecosystems and promoting climate-resilient livelihoods.

We will work with national, sub-national and local stakeholders to improve spatial and development planning by incorporating principles of green and blue economy including the protection, restoration and management of natural and semi-natural ecosystems, addressing water pollution, the promotion of sustainable business models, ecotourism and integrated waste management in ecotourism sites, access to sustainable finance and supply chain partnerships.

### Bangka Belitung Province

- East Belitung District
- Belitung District

### Central Java Province

- Kebumen District
- Banyumas District
- Cilacap District

### Central Sulawesi Province

- Palu City
- Donggala District
- Sigi District
- Parigi Moutong District

## Output 1

# NATIONAL POLICIES AND GUIDELINES ON LAND AND SEASCAPE (LaS) PLANNING

Support the development of policies, instruments and guidelines needed to integrate aspects of climate resilience and biodiversity into coherent spatial planning and development planning, both at the national and sub-national levels.

## Target Results

National policies and guidelines on Land and Seascape management that integrate aspects of climate resilience and biodiversity have been created and provide support for innovative development models and planning processes at national and subnational levels.

## Implementing Partners

- Ministries/Institutions operating in the fields of environment, agriculture, forestry, maritime affairs and spatial planning.
- Pilot provincial and district/city governments.
- NGOs and communities.
- Universities.

## Main Activities

-  Develop key performance indicators and monitoring systems for Land and Seascape management, climate change resilient development, and biodiversity protection, and integrate it into development planning.
-  Support the development of decision-making instruments, scenario-based models, and guidelines to support Land and Seascape planning processes at the subnational level that reflect all levels of society, including local communities, women, and youth.
-  Support the harmonization of national regulations for the integration of land and seascape/coastal planning.
-  Support Indonesia's post-2020 National Biodiversity Framework, as well as Indonesia's Bio-prospecting strategy and harmonizing with the Blue Economy approach.
-  Support the Indonesian Government in developing a national strategy on innovative financing mechanisms to support investment in CRL management within the Land and Seascape initiative.
-  Support the development of national guidelines on impact investments for the green and blue economy.

## Output 2

# IMPACT INVESTMENT AND INNOVATIVE FINANCING

Facilitate the development of impact investment strategies and innovative financing with a focus on ecosystem restoration, climate resilience, biodiversity conservation, integrated waste management, and sustainable income generation opportunities to encourage natural resource management ecosystems through public, private and community sector partnerships (PPCP)

## Main Activities

-  Developing the financial landscape and investment strategy in three Land and Seascape pilot areas.
-  Develop innovative financial mechanisms for institutions, markets and commodity supply chains.
-  Develop impact investments to attract green investment and promote a potential network of investors and financial managers.

## Target Results

Innovative financing and investment mechanisms for integrated Land and Seascape management at national and subnational levels.

## Implementing Partners

- Industries related to the development of Land and Seascape potential in the pilot project area.
- Industry and financial institutions, both public and private.
- Community/village business entities.

## Output 3

# LAND AND SEASCAPE PLANNING LABORATORIES, WHICH INTEGRATE THE NEXUS ON CLIMATE RESILIENCE, BIODIVERSITY AND DEVELOPMENT

Design and evaluate planning processes, policies, and instruments in selected provinces and districts and support the implementation of community-based conservation and ecotourism management models, incentive systems for “zero-waste” in community-based ecotourism areas, and PPCP for climate resilient living.

## Target Results

The Land and Seascape Planning Laboratory, which integrates the linkages between climate resilience, biodiversity and development, is implemented at the subnational level.

## Implementing Partners

- Pilot provincial and district/city governments.
- Universities.
- NGOs, Civil Society, and communities.
- Public in general.

## Main Activities

-  Coordinate the implementation of planning laboratories in three pilot provinces and ensure harmonization with national policies related to climate resilience, biodiversity and development as well as gender equality and social inclusion (GESI) action plans.
-  Develop an evidence-based master plan for the Land and Seascape pilot area including decision-making instruments, consultation and stakeholder engagement.
-  Support community-based conservation and ecotourism management models in the Land and Seascape pilot area, including karst ecosystems, water quality, waste management, and habitat protection for rare, threatened and protected (ETP) species.
-  Develop and implement an incentive system for “zero plastic waste” based on integrated waste management planning in selected community-based ecotourism areas and surrounding communities.
-  Build Public Private Community partnerships (PPCP) for CRL – one in each Land and Seascape “laboratory” area.

## Output 4

# CAPACITY BUILDING AND KNOWLEDGE MANAGEMENT IN INTEGRATED LAND AND SEASCAPE MANAGEMENT

Promote knowledge management and support capacity development through training, exchange, dissemination and replication of evidence-based solutions for better integrated Land and Seascape management.

## Target Results

Key stakeholders have increased their capacity and knowledge in integrated Land and Seascape management and are able to promote and share experiences.

## Implementing Partners

- Ministries/Institutions operating in the fields of environment, agriculture, forestry, maritime affairs and spatial planning.
- Pilot provincial and district/city governments.
- Counselors/Advisors.
- Educational institution.
- Training service providers.
- Media, influencers.

## Main Activities

-  Facilitate assessment and development of Land and Seascape management capacity and strategic planning.
-  Encourage exchanges and e-learning modules, training, conferences at national, regional and international levels.
-  Supports CRL adoption and replication through PPCP implementation in other Land and Seascape areas.
-  Support increasing awareness regarding Land and Seascape management, biodiversity, ecotourism and integrated waste management.
